Hurricane Matthew: Digicel Network Functionality  
25 October 2016

- Ninety-five percent of the Haitian population normally lives under Digicel radio coverage. Normal geographic coverage can be found at: [http://www.digicelhaiti.com](http://www.digicelhaiti.com)

- The information provided here comes from the Digicel network team. Recovery of the network is far advanced.

- Note that functioning mobile towers in an area may not always translate into the ability of all users to place calls, and will depend on network demand.

- The data does not differentiate between 2G, 3G or 4G services and therefore primarily serves as a guide to the functionality of voice and SMS services.

</table>

Proportion of network (radio cells) with normal function per commune - Status as of 25 October 2016

Depending on the local landscape radio coverage from towers in neighbouring communes may reach communes with non-functional towers.

Flowminder.org is a non-profit organization registered in Stockholm, Sweden. Digicel is a mobile operator in Haiti.
